Max-IP-Cam™ Network Camera

Live viewing from anywhere over the web

Swann's Max-IP-Cam™ differs from the usual web or PC camera because it is a stand-alone device with a built-in CPU and web server, that allows you to access video and sound from the camera, from anywhere in the world. Simply pan, tilt, and zoom, and you can control what you see from the web interface which enables you to use the 4x digital zoom lens to obtain a closer view.

The Max-IP-Cam™ allows you to record movement and save it to an SD Card or your Hard Drive. It also enables you to set up the motion detection feature and the automated e-mail alert notification. It is ideal for monitoring the office after hours, the children in the backyard whilst you're on the computer and general security surveillance.
